Task [12]: - Simulate Gaming concepts using pygame.

Aim: To create a basic pygame application to simulate simple gaming concepts.

Program:-

```
import pygame,
```

```
import time
```

```
import random
```

```
Snake - speed = 15
```

```
window - x = 720
```

```
window - y = 650
```

```
from IPython.display import Image,
```

```
display
```

```
import time
```

```
pygame.quit()
```

```
pygame.display.set_caption
```

```
game - window = pygame.display.set_mode  
((window-x, window-y))
```

```
FPS = pygame.time.Clock()
```

```
Snake.position = [100, 50]
```

```
Snake.position = ([100, 50], [20, 50], [40, 50],  
[60, 50])
```

```
prnd - position = [random.randrange(1, (window-x))]
```

Score = 0

def show_score(choice, color, font, size):

score_font = pygame.font.SysFont(font, size)

score_surface = score_font.render('Score' + str(score),
True, color)

score_rect = score_surface.get_rect()

game_window.blit(score, score_rect)

def game_over():

my_font = pygame.font.SysFont('Times New Roman', 50)

game_over_surface = get_over_surface.get_rect()

pygame.display.flip()

Time.sleep(2)

pygame.quit()

.quit()

while True:

for event in pygame.event.get():

if event.type == pygame.KEYDOWN:

if event.type == pygame.K_UP:

change_to = 'up'

```
if event.key == pygame.K_LEFT,  
    change_to = 'left'
```

```
if event.key == pygame.K_RIGHT;  
    change_to = 'right'
```

Program (2)

```
import pygame
```

```
pygame.init()
```

```
Screen_size = (640, 640)
```

```
Screen = pygame.display.set_mode([Screen_size])
```

```
pygame.display.set_caption('classboard')
```

```
black = (0, 0, 0)
```

```
white = (255, 255, 255)
```

```
if snake_position(1) < 0 or snake_position(1)  
    > window:
```

```
if 10:
```

```
    game_over()
```

```
for block in snake_body[1:]:
```

```
    if snake_position(0) == block[0] and
```

```
        snake_position
```

```
            [1] == block[1]:
```

```
                game_over()
```

Output:

board = ['h', 'k', 'l', 'a', 'x', 'v', 'u', 'y'],
 ['p', 'p', 'p', 'p', 'p', 'p', 'p', 'p'],
 [' ', ' ', ' ', ' ', ' ', ' ', ' ', ' '],
 [' ', ' ', ' ', ' ', ' ', ' ', ' ', ' '],
 [' ', ' ', ' ', ' ', ' ', ' ', ' ', ' '],
 ['p', 'p', 'p', 'p', 'p', 'p', 'p', 'p'],
 [' ', ' ', ' ', ' ', ' ', ' ', ' ', ' '],
 [' ', ' ', ' ', ' ', ' ', ' ', ' ', ' '],
 [' ', ' ', ' ', ' ', ' ', ' ', ' ', ' '],
 ['p', 'p', 'p', 'p', 'p', 'p', 'p', 'p']

['k', 'v', 'g', 'g', 'k', 'v', 'x', 'x']

draw - board ()
 draw - pieces (board)

white Turn:

for spot in figure: event = get ();
 if event type == 'pgame': abort;

Pygame - draw ()

quit ()

Pygame - display . update ()
