Task 1: Use Tkinter module for GUI design

Aim: Design a simple GUI Application using Tkinter to collect and display student details.

Program (1)

```
import Tkinter as tk
def change_font():
    label.config(font = ('Arial', 18, 'bold'))
root = tk.Tk()
label = tk.Label(root, text = "Hello world!")
font = ('Helvetica', 10)
label.pack()
button = tk.Button(root, text = "change font", command = change_font)
button.pack()
root.mainloop()
```

Program (2):

```
import Tkinter as tk
root = tk.Tk()
root.title("Text-Box Input")
label = tk.Label(root, text = "Enter value!")
entry = tk.Entry(root)
```

```

label = str(label (row), row = ["Enter value 2:"])
why 2 = str(why (row))
label 3 = str(label (row), row = ["Enter value 3:"])
why 3 = str(why (row))
why 1 = copy.deepcopy(=30)
why 2 = copy.deepcopy(=30)
why 3 = copy.deepcopy(=30)
why get = values ( )
val 1 = why 1.get ( )
val 2 = why 2.get ( )
val 3 = why 3.get ( )
print ["value 1: 'val1'"]
print ["value 2: 'val2'"]
print ["value 3: 'val3'"]

```

```

take 1 row ( )
why 1 row ( )
table 2: pack ( )
why 2: pack ( )
table 3: pack ( )
why 3: pack ( )
dict not +: but n pack ( )
root.mainloop ( )

```
