

Day 24: bar chart

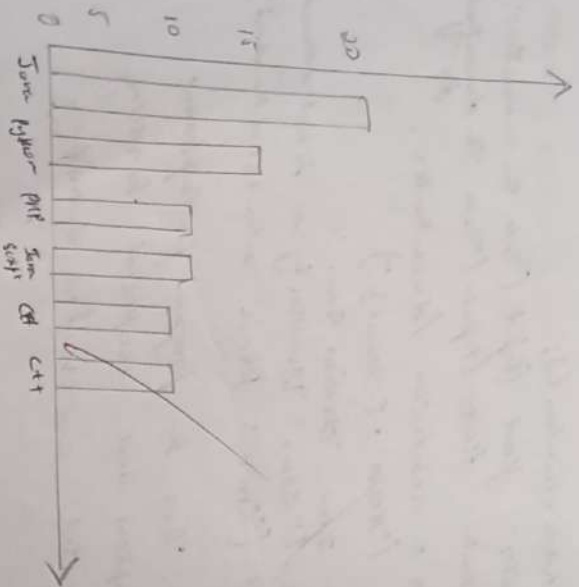

Task: Use matplotlib module for plotting in python

Aim: To use matplotlib module for plotting in python with a program to display a bar chart of popularity of programming language.

Algorithm

- Plot a line chart showing marks of students across 3 subjects.
- Plot a bar chart comparing Average marks of our subject.
- Plot a pie chart showing the percentage contribution.

OUTPUT

Program: 1

import matplotlib.pyplot as plt

languages = ['Java', 'Python', 'PHP', 'JavaScript', 'C++']

popularity = [22, 17, 8, 8, 7]

plt.bar(languages, popularity, color='b')

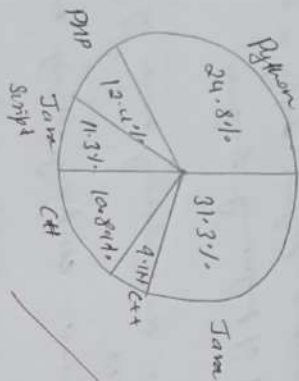

plt.title('Popularity of programming language')

plt.xlabel('programming languages')

plt.ylabel('popularity')

plt.show()

OUTPUT:

Program 2

Output must plot with pyplot as plt

language = ['Java', 'Python', 'PHP', 'JavaScript', 'C++', 'C#', 'Swift', 'Kotlin']

language

Popularity = [22.2, 17.6, 8.8, 8.7, 7.6, 6.7, 1.1, 1.1]

plt . plot (Popularity, labels = language)

plt . show ()

plt . title (Popularity of programming language)

plt . legend (language) (or = 'best')

plt . show ()
